

Paramedic Certificate

This advanced emergency medical care program consists of four courses, including a clinical rotation in a hospital setting and a field internship with an ambulance service. You learn emergency procedures such as cardiac monitoring and defibrillation and the administration of medications and IV fluids. Successful completion of this program and subsequent certification exams will enable graduates to work as skilled paramedics and to provide sophisticated, advanced pre-hospital life support.

JCCC's Paramedic program is fully accredited by the Committee on Accreditation of Educational Programs for the EMS Professions (CoAEMSP). For more information, see the **Paramedic Admissions Process web page**. The information packet, which includes deadlines, admission requirements and options for meeting academic criteria is available year-round and updated annually. The application and attachments are only available during the application period, which opens on **June 1** and closes on **October 1** each year.

This is a selective admission program with limited enrollment. If you are accepted into the program, you take classes in the spring, summer and fall, completing the program in December.
